"Jyot se Jyot Jalao Campaign" Focusing on Diabetic Blindness

Diabetic Retinopathy Camp at Vishrampur, Palamu on 03 & 04 January 2019
Diabetic Retinopathy Camp at Kashyap Memorial Eye Hospital, Ranchi on 16-11-2015

The vast majority of people are unable to identify the early signs of the disease, including weight loss, slow healing of cuts and blurring of vision, which progress in many cases of blindness that are preventable. Early detection is the key to preventing vision loss due to diabetic retinopathy. This can be achieved through routine retinal screening. Detecting retinal changes and managing the disease under control is very important and it is vital to do so in the early stages of retinopathy.
